Doctor's Instructions - What is Rimadyl:
 Rimadyl is a non-steroidal anti-inflammatory drug (NSAID). Rimadyl works by reducing hormones that cause pain and inflammation in the body.

What should I discuss with my veterinarian before giving Rimadyl to my pet:
 Tell your veterinarian if your pet has an allergy to aspirin or any other NSAID; an ulcer or bleeding

<p>in the stomach; has liver, or kidney disease; congestive heart failure; fluid retention; bleeding disorders; heart disease; or high blood pressure. Tell your veterinarian if your pet is pregnant or lactating.</p> <p>How should this medication be given: Rimadyl should be given with food. Keep plenty of water available for your pet. Store Rimadyl at room temperature, away from moisture and heat. Keep this medication away from children and pets. Do not give Rimadyl to cats.</p> <p>What happens if I miss giving a dose: Give the missed dose as soon as you remember. However, if it is almost time for the next regularly scheduled dose, skip the missed dose and take the next one as directed. Do not give a double dose of the medication.</p> <p>What happens if I overdose the pet: Seek emergency veterinary medical treatment. Symptoms of Rimadyl overdose include nausea, vomiting, stomach pain, drowsiness, headache, blurred vision, seizures, panting, little or no urine production, and slow breathing.</p> <p>What should I avoid while giving Rimadyl to my pet: Many over-the-counter cough, cold, allergy, and pain medicines that contain aspirin or other NSAIDs similar to Rimadyl. Before giving any other prescription or over-the-counter medications, talk to your veterinarian or pharmacist.</p> <p>What are the possible side effects of Rimadyl: Contact your veterinarian if your pet has bloody, black, or tarry stools, or blood in vomit as these symptoms could indicate serious side effects. If any of the following serious side effects occur, stop giving Rimadyl and seek emergency veterinary medical attention: an allergic reaction (difficulty breathing; swelling of the lips; tongue or face; hives), muscle cramps, open sores in the mouth, rapid weight gain due to fluid retention, seizures, or abdominal cramping. If your pet experiences any of the following less serious side effects, continue giving Rimadyl and talk to your veterinarian: headache, dizziness, nausea, diarrhea or constipation, depression, fatigue or weakness, or dry mouth. Other side effects may also occur. Talk to your veterinarian about any side effect that seems unusual or bothersome to your pet.</p> <p>What other drugs will affect Rimadyl: Tell your veterinarian if your pet is being given aspirin; another NSAID such as etodolac, carprofen, or piroxicam; any over-the-counter cough, cold, allergy, or pain medication; warfarin; furosemide; a steroid such as prednisone; insulin; or probenecid. Drugs other than those listed may also interact with Rimadyl. Talk to your veterinarian before giving your pet any prescription or over-the-counter medicines.</p>

10-10-16	9:43a	MRB	CC	Client Call-	1	
	CR: 10-10-16 at 9:43a: LMOM to foster Jodie and informed her that we will be transferring P over to Warm Springs Pet Hospital to perform both spay and cherry eye tacking with DO. I also SW Aubrey and informed her, so she can relay the message in case Jodie doesn't receive it.					
	CR: 10-10-16 at 9:55a: Jodie called back and was upset that she wasn't informed that DO wouldn't be here for the surgery. Jodie then mentioned that she wouldn't be able to pick P up from Warm Springs Pet Hospital. I asked Jodie if I can call her back, so I can figure something out. Per MM, we can pick P up after the surgery and recover P here, so Jodie would be able to pick it up.					
	CR: 10-10-16 at 9:58a: LMOM, informed Jodie that she will be able to pick up at our location instead of WSPH. I also relayed the information to Aubrey.					
	8:24a		TN	Tech Note-	1	
	Foster mentioned to me that she will be paying for the cherry eye tacking and the rescue is paying for the rest of the spay + add-ons.					
10-10-16	8:21a	DO	E29	Pre-Op Exam	1	
	Subjective: P is in for a spay and cherry eye tacking. Foster / Rescue opted for pain meds and buster collar. Foster is also concerned about a marble size lump where a microchip is normally placed and believes that P may have gotten a rxn from it. Vax: DHPP#4 Chief Reason For Visit: Spay / Cherry Eye					
	Eating/Drinking OK: normal Vomiting/Diarrhea: none Current Medicines: none					

	Objective: Weight (lbs): 9.0
